

Skills

- Excellent knowledge of Adobe Creative Suite.
- Well rounded abilities with all major desktop and leading mobile operating systems.
- Experience preparing artwork and developing for Android and iOS.
- Advanced knowledge of current web technologies — HTML, CSS, Javascript, jQuery, PHP, Rails, Wordpress, MySQL, and Git.

Experience

Visa Status H1-B, 2006-September 2012 — British citizen

2005–Present **Creative Commons** — Senior Designer

As sole designer at Creative Commons, I'm responsible for all graphic design production, and interact with teams covering every facet of the organization, from fundraising to engineering. My work involves web development, web analytics, user interface, user experience, and front-end. I led three major design iterations of the main website, and many minor revisions of online properties, each time improving usability and user experience as the messaging focus changed.

Recent Development Experience

2010–Present **Portishead** — Rails 3 / jQuery — <http://www.mralex.org>

An open source portfolio application employing advanced Javascript and CSS techniques. I developed it not only to keep my Rails skills keen, but out of a desire to build a portfolio application that worked the way I needed it to.

2010 **FotoTable** — HTML5 / CSS3 / jQuery — <http://redprocess.com/ftable>

A Flickr based photo browsing application I developed for the 10K Apart challenge. Its interface was designed to be reminiscent of sorting through a stack of photos scattered across your table.

2009–Present **Mercury** — iOS / CocoaTouch — <http://redprocess.com/mercury>

A location aware weather application I developed to help track my location on motorcycle travels. An easy to read user interface helps present critical weather information in a simple and accessible way. A reviewer of Mercury said, *"In my opinion, its forthright simplicity makes it the quintessential iPhone app."*

Education

2002–2005 **Art Institute of California** — San Francisco
BS, Graphic Design
